New Noah's Ark

"Breaking News: More than 10,000 people died in a powerful hurricane."

It was nighttime after dinner and I was with daddy and mommy watching the storm on TV. I saw that it was raining cats and dogs with strong winds. It was flooding everywhere and swallowing the houses and cars in a glance.

I saw many people drown and disappear in the water. My heart was beating so fast and I asked, "Why did this happen?"

"The storm was too strong. The water was too high. The homes were not built to handle powerful hurricanes and flood," Dad said. Mom nodded.

Ivan | Age: 8 | 3rd grade

"What if we build a ~~transform~~ transformative shelter?" I asked.

Dad looked surprised,
"A what?"

"A shelter that can change its shape like a ~~transform~~ transformer. The shelter can move like monster building in Dog Man movie." I explained.

Mom smiled, "How would it work?"

"Before hurricane comes, it is a regular shelter ~~hall~~ building. When the hurricane comes, it will turn around and strong so that the wind can't push it down. When it is flooding, the shelter will stand up high with long legs so water can't flush it away. I will use solar panels for the entire shelter."

Ivan | Age: 8 | 3rd grade

So that the power will not be cut off easily. No people will die in hurricane if they live in transformative shelter." I further explained my ideas.

Dad nodded and said, "I like your creative idea. That could help many people."

In a conclusion, I understand humans can't stop the disaster, but we can prepare and design a smarter shelter to take care of people who need the protection from the disaster.

When I grow up, I want to be an engineer so I can make the new Noah's Ark come true.
